

Rules of the game

Singleplayer

On the main page you can press the singleplayer button and then you can choose one of the 3 difficulties.

1. **Easy** – You must guess only 3 numbers. That is the easiest level.
2. **Medium** - You must guess 4 numbers. It is more difficult than the previous one.
3. **Hard** – On the hardest level you must guess 5 numbers.

The single player mode has two tasks.

- First task – On the first task the numbers cannot be repeated
- Second task – On the second task the numbers can be repeated.

When you have chosen the difficulty that you wish to play on, you will see a different amount of fields. You have 13 attempts to guess the number. If you do not guess it, you lose. The purpose of the game is to guess the random code that was generated. After each attempt the guessed numbers and guessed positions are displayed on your screen. You win the game by guessing the number and you can go to the second task.

Multiplayer

In the multiplayer mode of the game 2 people can play against each other. One person creates a room and gives the code that was given to him so that the other one can join it. The person who creates the room can chose his role.

1. **German** – If you choose to be German you create the code. Your task is the code to be hard so that the British cannot defeat you easy.
2. **British** – Or if you choose to be the British you are guessing the code that was created by the German. You have 13 attempts to guess the code.

As the single player the multiplayer also has two tasks:

- First task – On the first task the numbers cannot be repeated
- Second task – On the second task the numbers can be repeated.
